Biodegradable plant guard with internal mulch mat

MOHUA NURSERY
NATIVE PLANTS

'The Koru represents new beginnings, growth, regeneration, and the cyclical nature of life.'

BENEFITS

The internal weed suppressing design not only reduces the weed competition from overtaking the plant within the plant guard, it acts as a mulch mat to keep the soil moist.

Save on money and time with the quick and easy install. For jobs involving both a tree guard and mulch mat, the all in one design saves on transportation and the extra costs of purchasing a separate mulch mat.

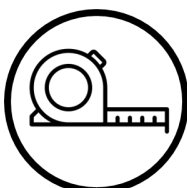

The cardboard is water resistant, eco friendly, biodegradable, and recyclable. The plant guard does not need to be removed and will last up to 24 months depending on the local climate.

Enhances growth and survival rates by protecting the plant from the wind and summer sun. The 350mm height also protects from pests such as rabbits.

Protects plants from release spraying and line trimmers. Save money and time by not needing to weed within the guard.

350mm tall by 130mm by 130mm wide. The square shape gives the equivalent area of a triangle guard which has an approx. 200mm side length. The fold in mulch mat flaps also help keep the guard formed and rigid.

- Designed, prototyped, and tested in Mohua/Golden Bay, NZ
- NZ made cardboard and produced in Christchurch, NZ
- Use one bamboo stake for general plantings, or two stakes for high wind zones

Prices for 2024 - includes 1 stake

Per set: \$2.30 including GST

1000+ sets: \$1.80 including GST

Extra stakes: \$0.20 including GST
